Geotouch[®]

for MULCHING

From high quality, chemical free landscape fabrics and root barrier solutions to surface stabilization solutions, Geotouch[®] offers a complete range of smart products for professionals. Geotouch[®] is a weed control geotextile and act as an alternative to pesticides when it comes to controlling weeds in a variety of residential and non-residential applications. Geotouch[®] effectively fights against the growth of weeds without using chemical products. It is ideal to be used under materials such as gravel, mulch and peat.

FEATURES

Geotouch[®] is a complete range of high quality nonwovens geotextiles for professional gardeners. It keeps weeds and root under control without the use of chemical additives, protects plants, stabilizes ground of trafficked areas and acts as filter in the dewatering trenches.

High Permeability :

Rainwater reaches roots without any obstacles.

High Porosity :

It lets the soil breathe.

High Mechanical Resistance :

Its needles felt structure prevents roots penetration and resist to mechanical stress as well.

FUNCTIONS

- + Weed Control
- + Filter
- + Stabilisation

Geotouch[®]

for PAVER UNDERLAY

Pathways and courts grounds are stabilized with Geotouch[®] geotextiles to get an effective separation and drainage, ensuring an even surface. Geotouch[®] is a geo-textile designed for the stabilization and separation of different soils. It is especially indicated where the stresses on the ground are not particularly strong such as on pathways and pedestrian areas.

FEATURES

Geotouch[®] is a cheap geotextile made of recycled fibers and for this reason is environmentally friendly. It is ideal for small household and garden work.

Recycled :

It helps the environment as it uses scrap fiber.

Profitable :

It is economically advantageous, thanks to its fibers.

Flexible :

It is easy to install and easily adjusts to the ground.

FUNCTIONS

- + Protects Membranes
- + Filter & Drainage
- + Soil Stabilisation

Geotouch[®]

for GROWBAG PLANTERS

Made from recycled plastic bottles otherwise destined for landfills, comes a lightweight, breathable felt fabric that is crafted into plant pots that can be used in gardens, yards or home. These fabric pots are wonderful for plants—roots can cool in summer, and not suffocate from over-watering. The fabric material lets water permeate so there's sufficient drainage without holes in the pot. Plus, they're washable and reusable and will decompose if planted into the ground.

FEATURES

- Eco-Friendly, made from recycled water bottles
- BPA free and UV Stabilised
- Better than solid-sided plastic containers
- Boosts plant growth and yields
- Encourages a more fibrous, dense root structure
- Fabric allows roots to breath
- Prevents roots from circling
- Allows roots to grow freely throughout soil
- Bags are reusable and washable
- Superior insulation keeping plants warmer in winter & cooler in summer
- Saves time on vegetative growth cycle
- Easy drainage prevents overwatering and root rot
- Ideal for hydroponic systems like drip irrigation, overheads and flood trays
- Lightweight for easy movement and transportation (handles on larger sizes)
- Ventilation keeps plants at ideal temperature
- Durable 260gsm

FUNCTIONS

- + Outdoor Container Growing
- + Trees & In-Ground Growing
- + Hydroponics

Geotouch[®]

for GREENWALL PLANTERS

Geotouch[®] vertical garden planters are designed to use the micro fibers in synthetic felt so that all the plants are watered equally. The felt is made from recycled plastic water bottles, a non-toxic nylon fiber that is indestructible and tough. This amazing material provides a safe growing medium that is pH neutral and non-reactive, so one can garden organically right on the wall - it's even safe for vegetables and herbs. Roots grow right into the felt, which comes alive thanks to the microbiology in the soil. Root Wrappers are small squares of the same felt that make planting easier. They allow easy change and customised arrangement of the living wall. The non-binding wraps have a loose weave that let roots grow through the felt and into the planter. This lets plants reach full maturity giving a very long life to the vertical garden.

FEATURES

It's lightweight innovative design lets plants breathe and keeps walls dry.

- Pleated felt is stapled onto a lightweight plastic board.
- Watered from the top, water wicks down to water each plant.
- Unbound by the pockets, roots grow into the moist felt.
- Patented pleated design keeps moisture in the system and the front dry.
- The felt breathes to host living microbiology and healthy plants.
- Planting with some soil balances pH and stabilizes moisture.

FUNCTIONS

- + Excellent Wall Hanging Gardens
- + Great alternative to traditional baskets
- + Used in multiple places – decks, patios, balconies, living areas, etc.
